

Spring Rest Web Services

Why we need Rest Web Services?

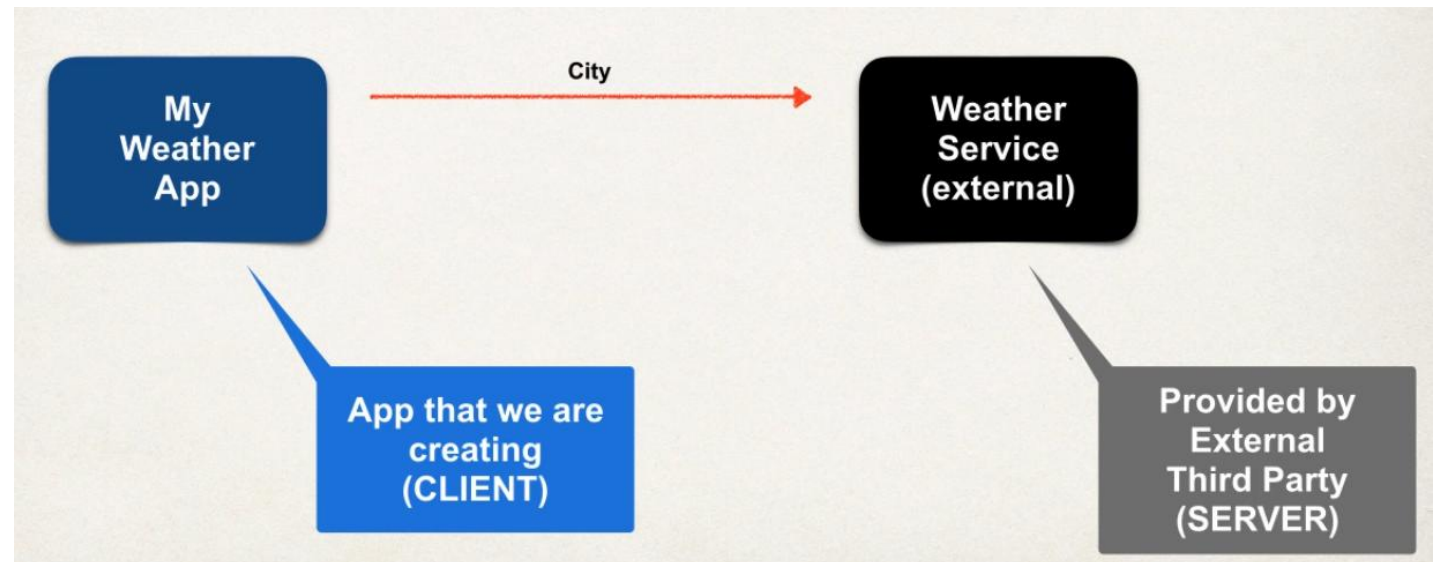

- Business Problem
 - Build a client app that provides the weather report for a city.
 - Need to get weather data from an external service.

Application Architecture

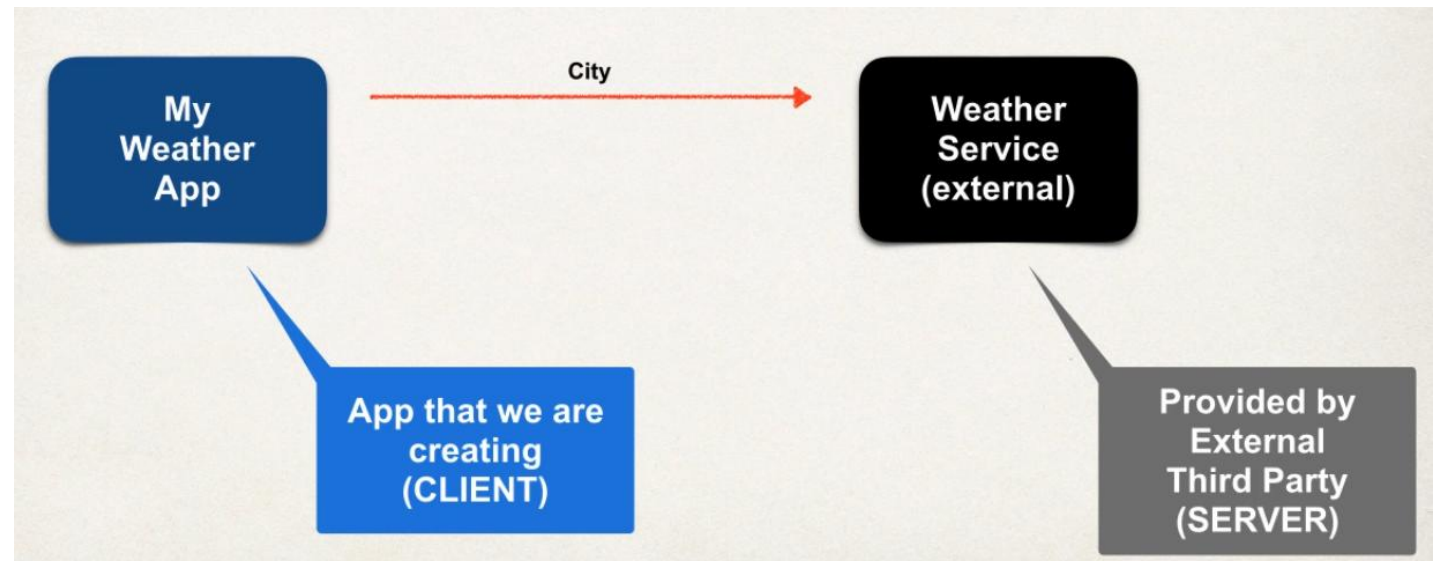

Questions?

- How will we connect to the Weather Services?
- What programming language do we use?
- What is the data format?

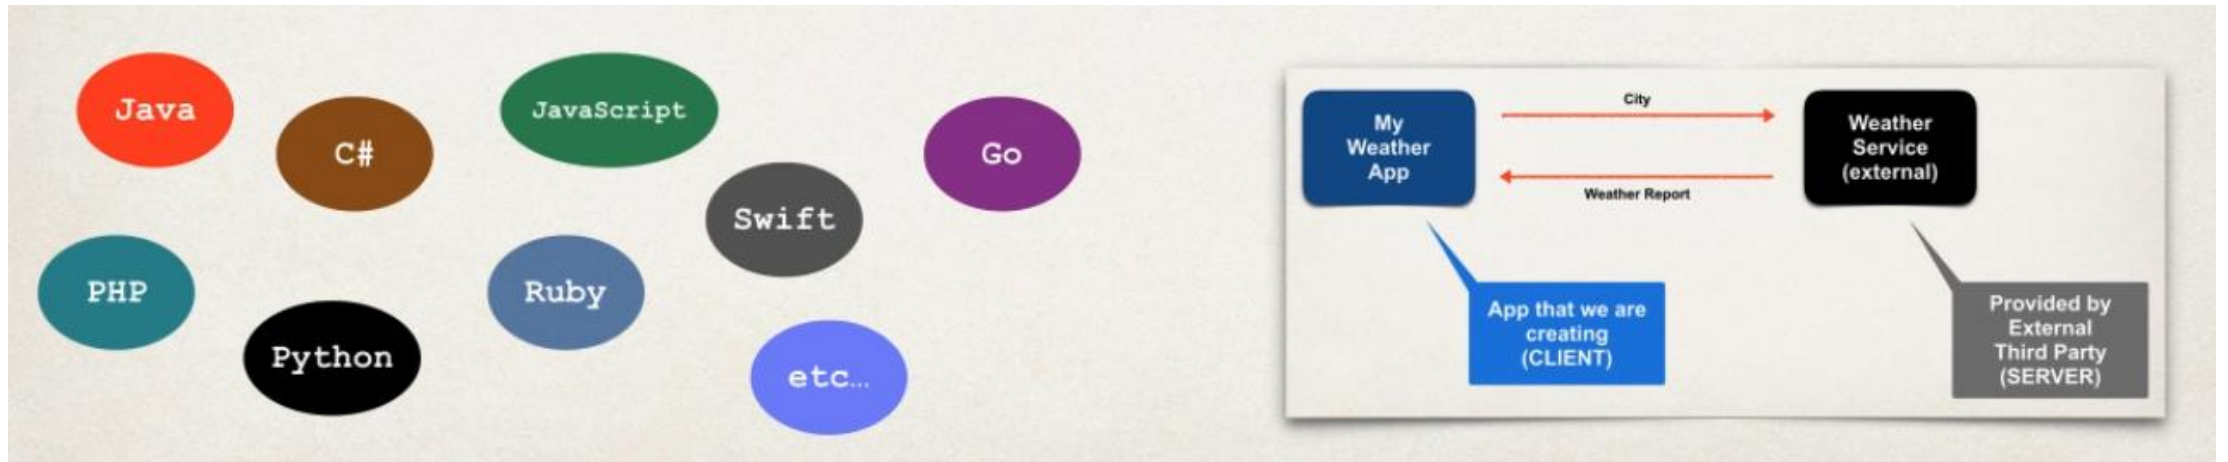

Answers

- **How will we connect to the Weather Service?**
 - We can make REST API calls over HTTP
 - **REST**: **RE**presentational **S**tate **T**ransfer
 - Lightweight approach for communicating between applications

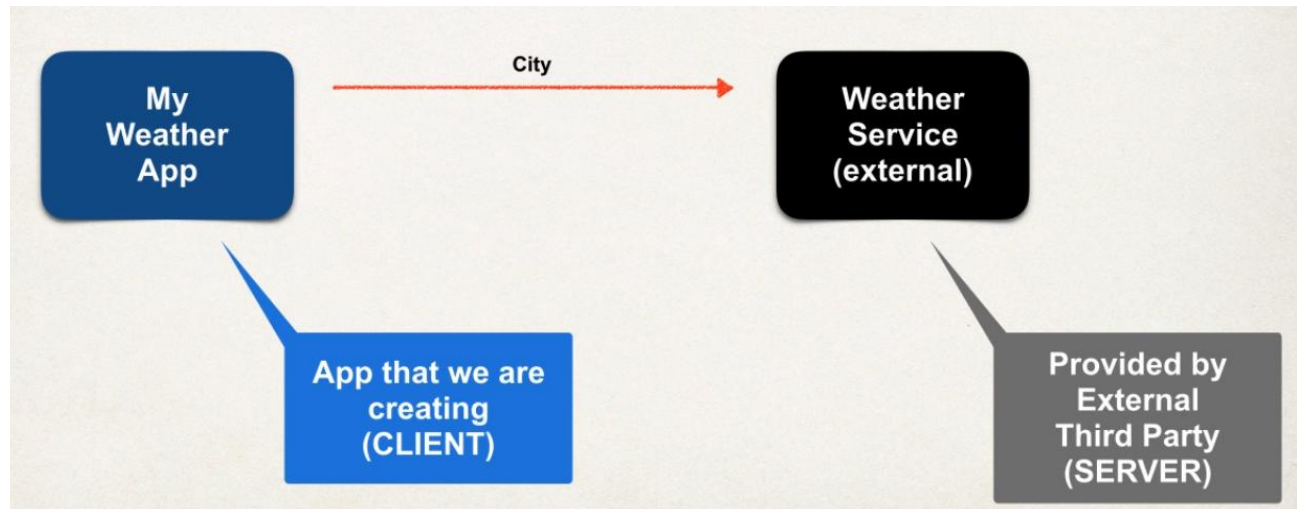

Answers

- **What programming language do we use?**
 - REST is language independent
 - The **Client** application can use **ANY** programming language
 - The **Server** application can use **ANY** programming language

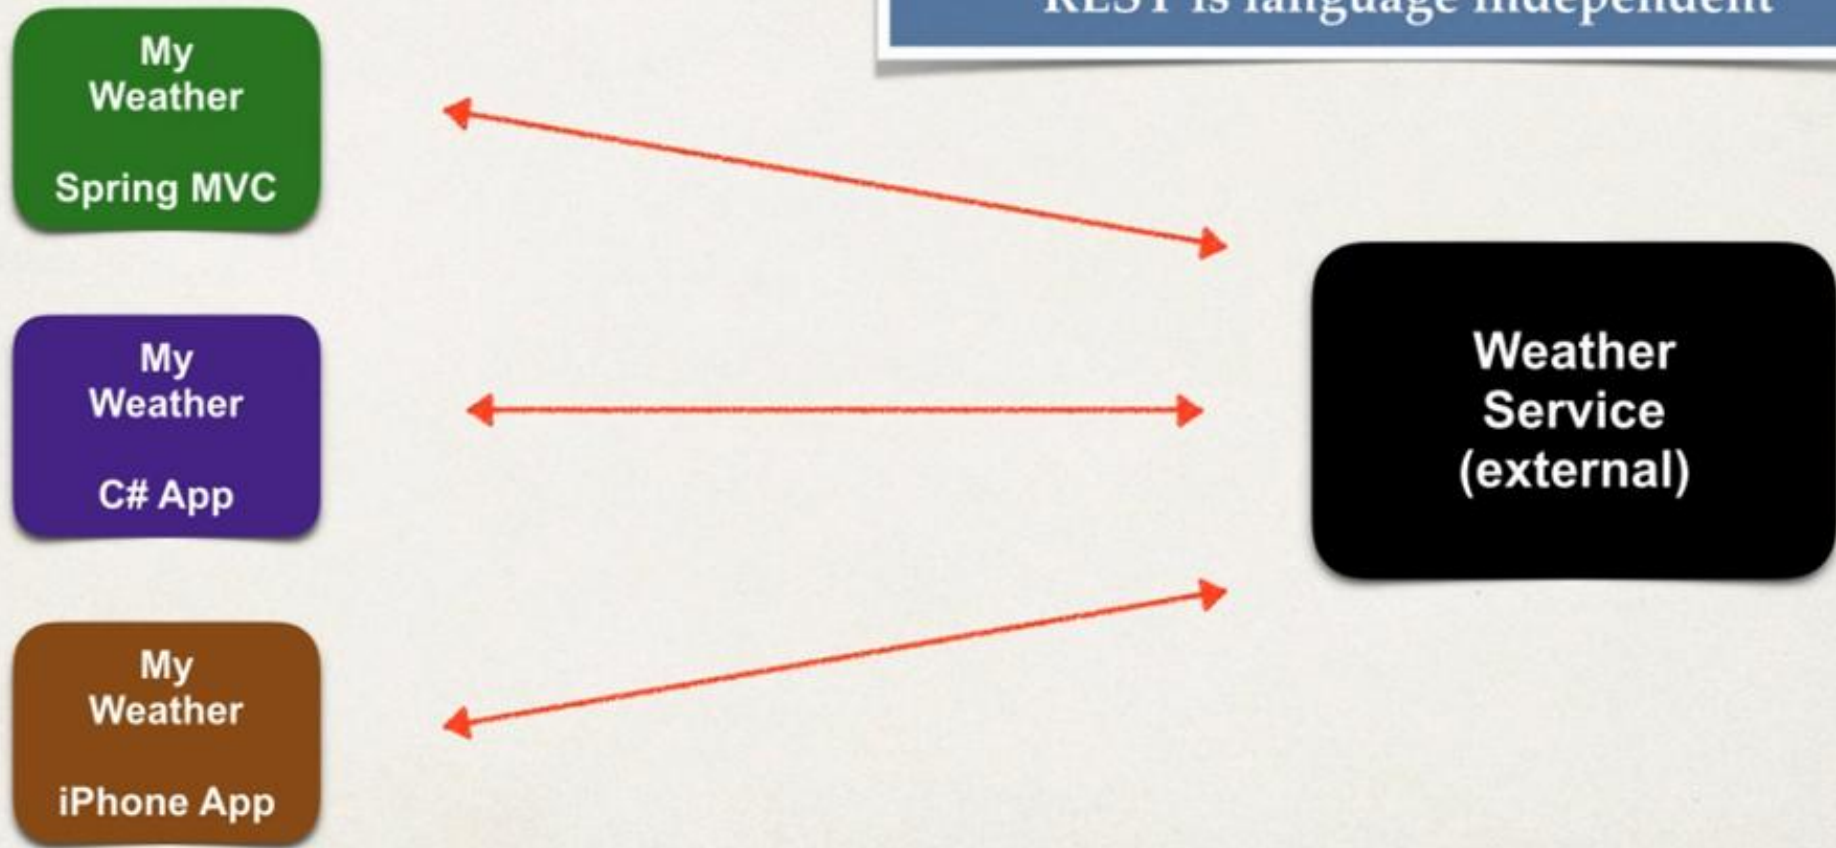

Answers

- **What is the data format?**
 - REST application can use any data format
 - Commonly see XML and JSON
 - **JSON** is most popular and modern
 - **JavaScript Object Notation**

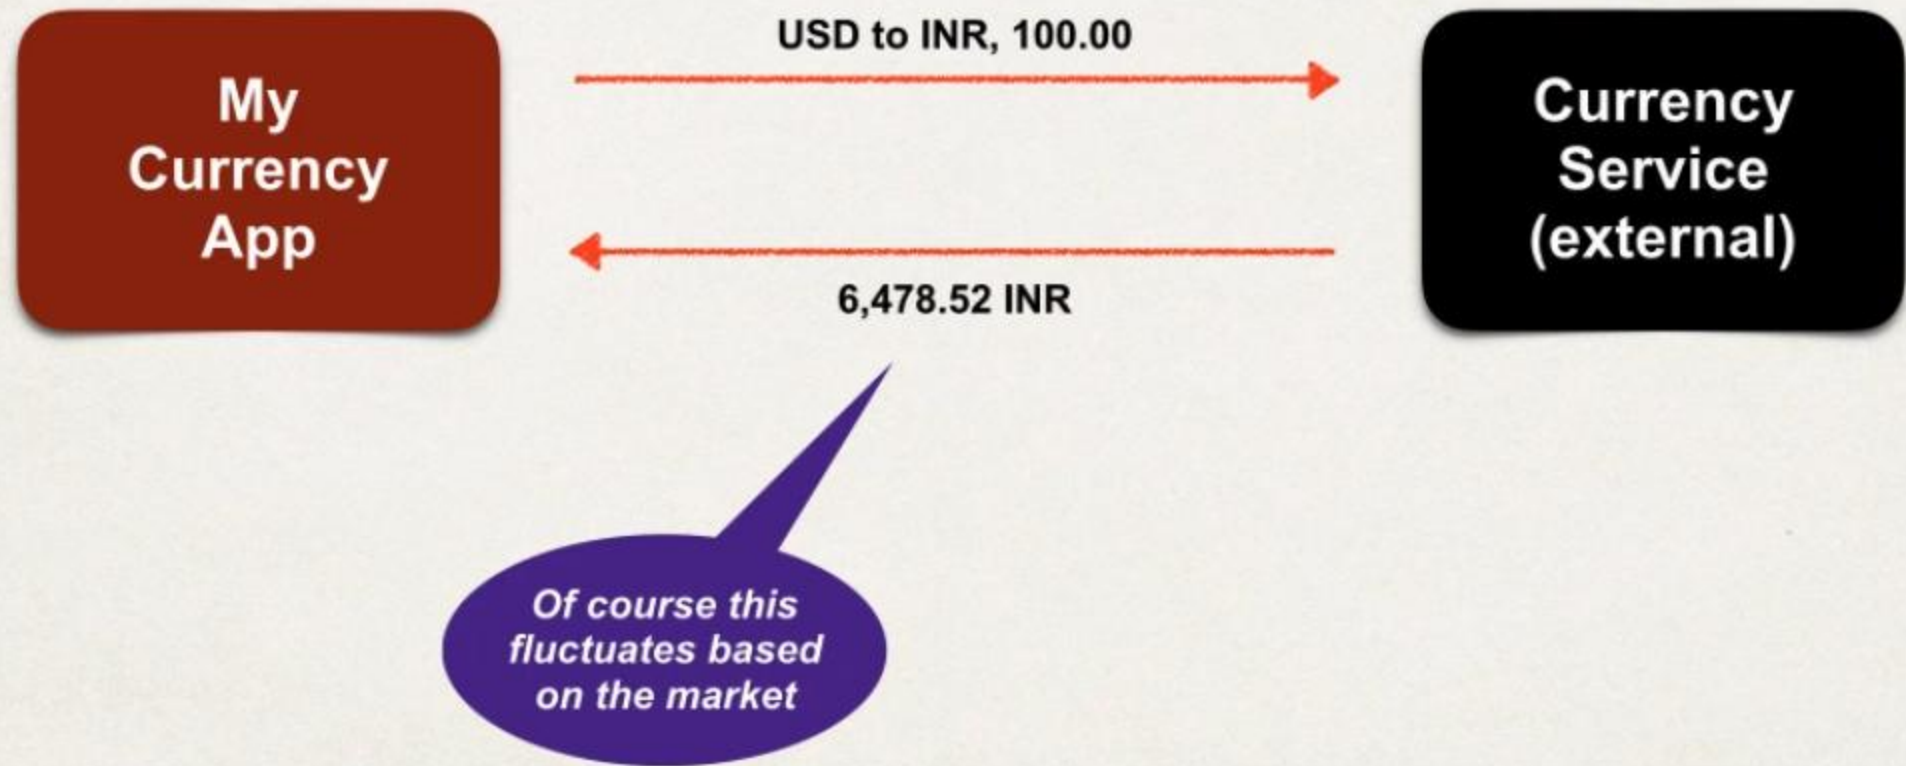

Multiple Client Apps

Remember:
REST calls can be made over HTTP
REST is language independent

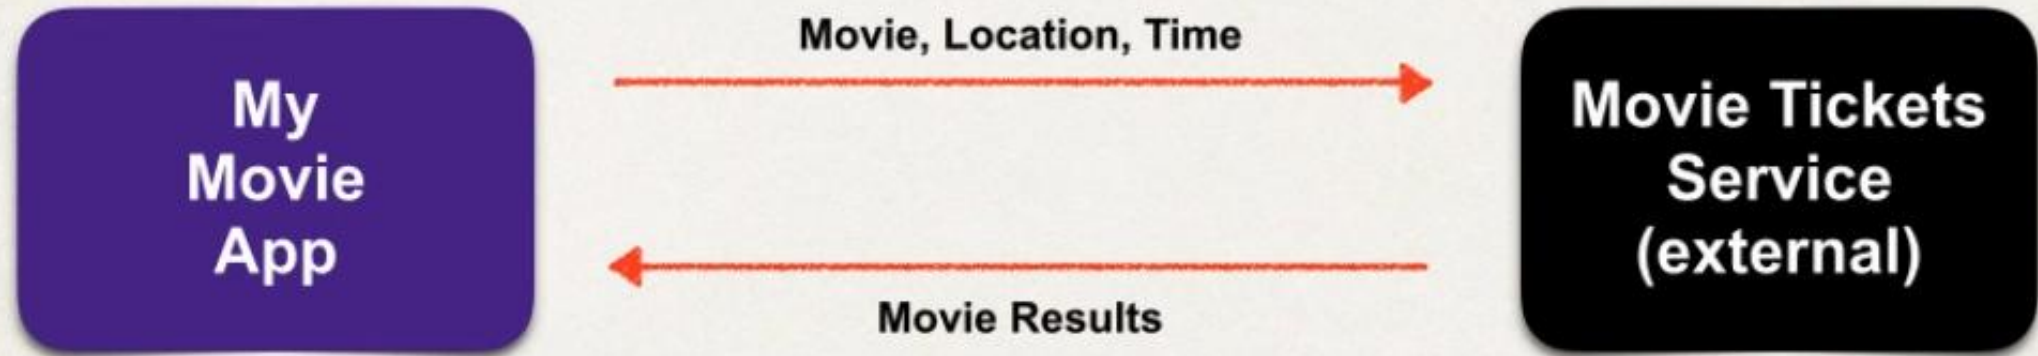

Other Examples for Web Services

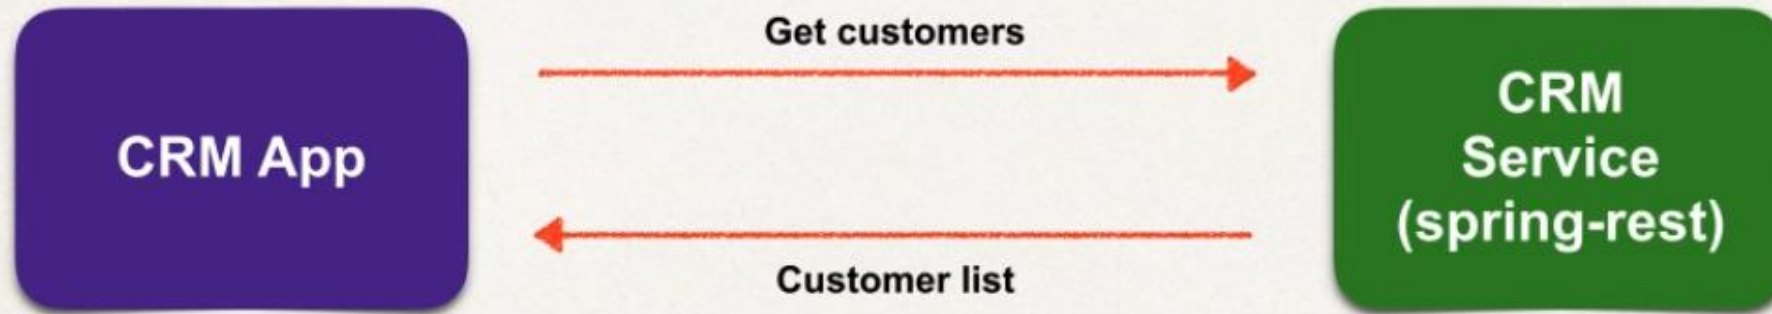

Currency Converter App

Movie Tickets App

Customer Relationship Manager (CRM) App

We will create
this code using
Spring REST
(SERVER)

Where to find REST API's?

www.programmableweb.com

ProgrammableWeb

What do we call it?

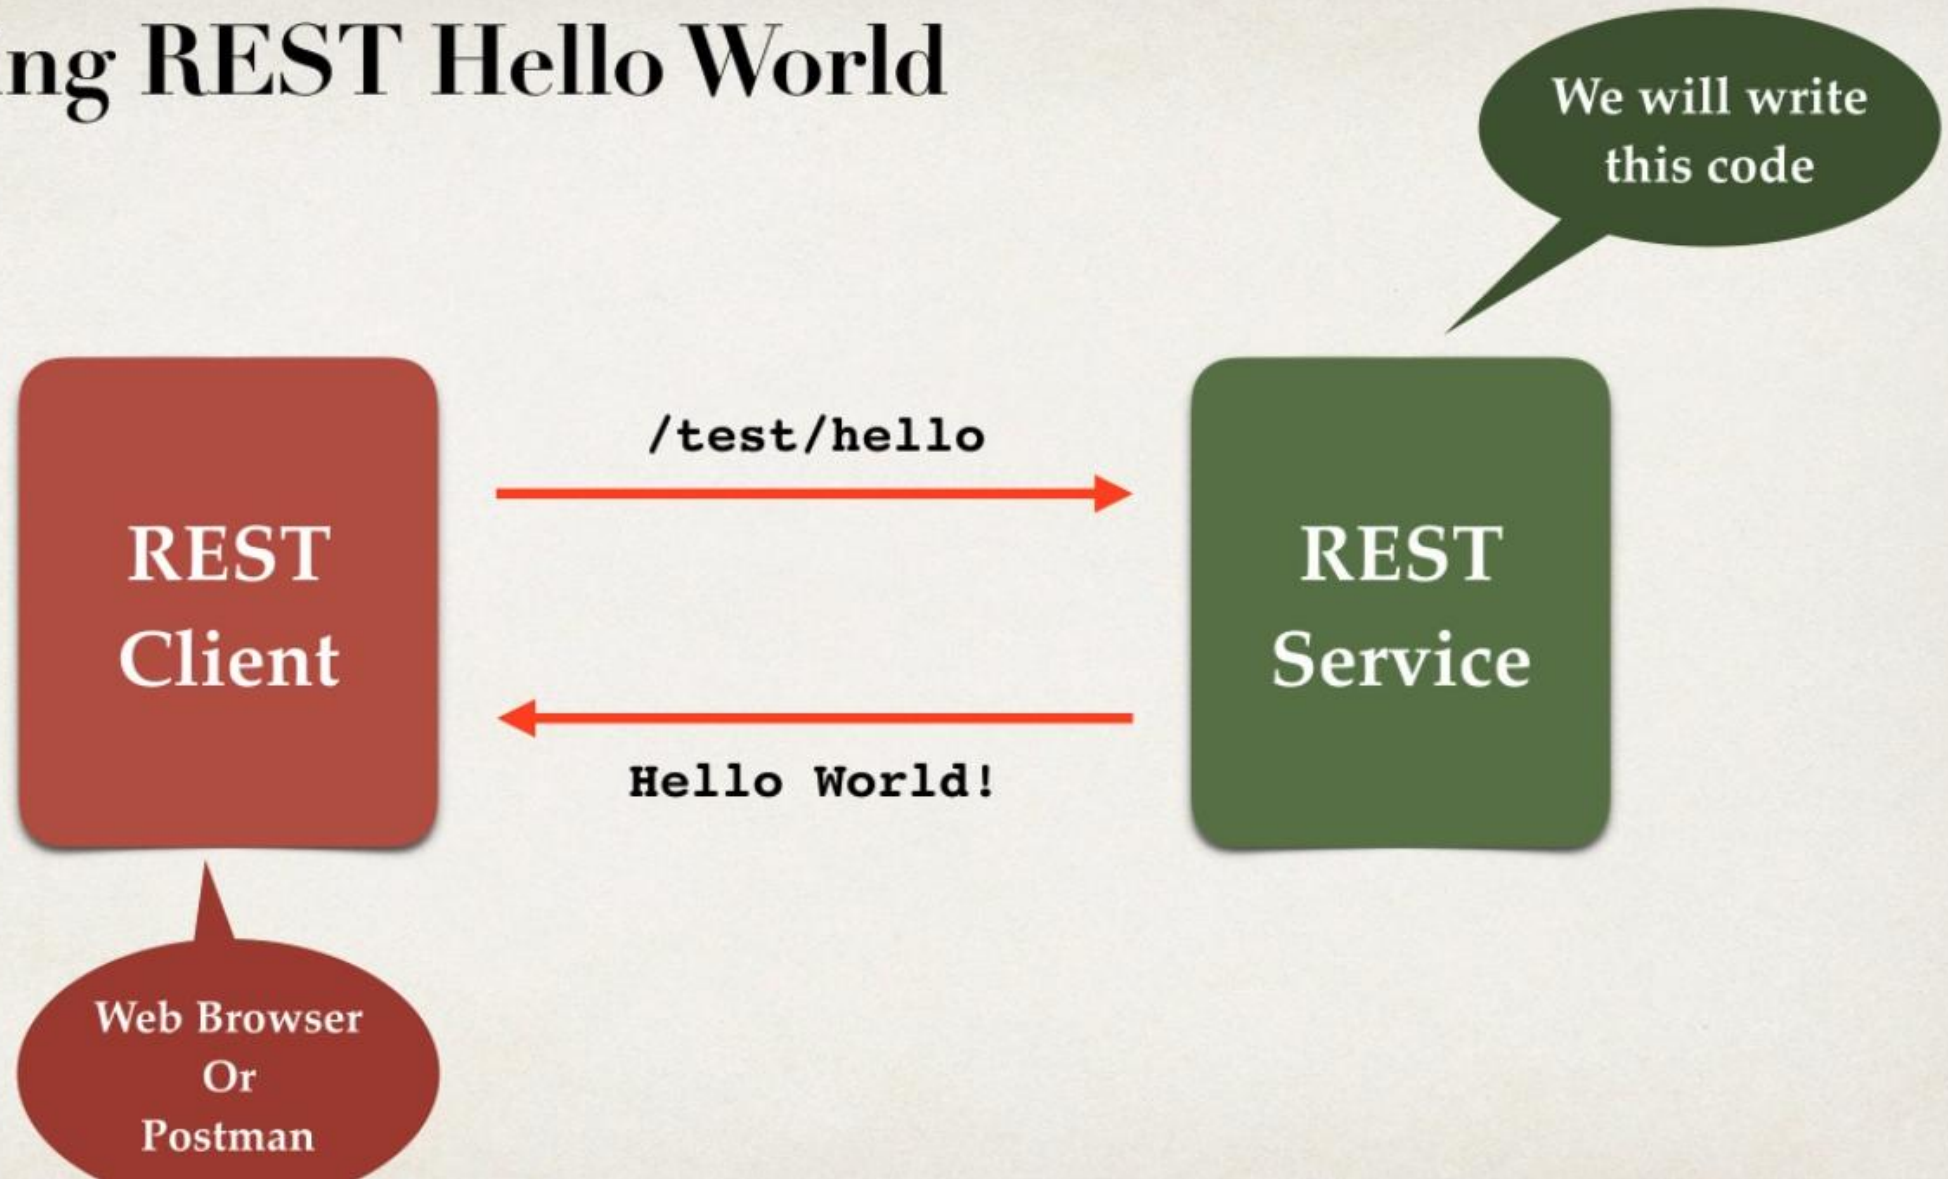

Spring REST Support

Spring REST Support

- Spring Web MVC provides support for Spring REST
- New annotation **@RestController**
 - Extension of @Controller
 - Handles REST requests and responses
- Spring REST will also automatically convert Java POJOs to JSON
 - As long as the Jackson project is on the classpath or pom.xml

Spring REST Hello World

Spring REST Controller

Adds REST support

```
@RestController
@RequestMapping("/test")
public class DemoRestController {

    @GetMapping("/hello")
    public String sayHello() {
        return "Hello World!";
    }
}
```

Access the REST endpoint at
/test/hello

Returns content to
client

Testing with REST Client - Postman

Testing with REST Client - Web Browser

Access the REST endpoint at
`/test/hello`

The response

Web Browser vs Postman

- For simple REST testing for GET requests
 - Web Browser and Postman are similar
- However, for advanced REST testing: POST, PUT etc ...
 - Postman has much better support
 - POSTing JSON data, setting content type
 - Passing HTTP request headers, authentication etc ...

Thank you
